BASIC NEUROLOGY

An Introduction to the Structure and Function of the Nervous System

by J. P. SCHADÉ, Central Institute for Brain Research, Amsterdam
and DONALD H. FORD, Department of Anatomy, State University of New York, Downstate Medical Center, Brooklyn, N.Y.

7 × 10", viii + 373 pages, 7 tables, 150 illus., 421 lit. refs., 1965, Dfl. 30.00, 65s., \$10.00

Contents: I. NEUROANATOMY. 1. Embryology and development. 2. Histogenesis. 3. Distribution of cells. 4. The nerve cell. 5. Myelin formation. 6. Neuron-glia relationships. 7. Degeneration of neurons. 8. Maturation in the nervous system. II. NEUROPHYSIOLOGY. 1. Electrical parameters and ionic composition of neurons. 2. The action potential. 3. Excitatory synaptic action. 4. Inhibitory action of the neuron. 5. Electrical events in receptor cells. 6. Neuromuscular transmission. 7. Some aspects of brain rhythms and a concluding remark. III. NEUROCHEMISTRY. 1. Chemical composition of the brain. 2. Lipids. 3. Proteins. 4. Carbohydrates. 5. Nucleic acids and nucleotides. IV. NEUROPSYCHOLOGY. 1. Some methodological aspects. 2. Emotions. 3. Motivation and drive. 4. Activation and sleep. 5. Learning memory and the cognitive processes. Annotated bibliography. Subject index.

From Reviews:

"Approximately every 10 to 15 years a unique book appears that fulfills a definite need and does not duplicate existing texts. This is such a book..."
Annals of Internal Medicine

"...well written and well illustrated... a bird's-eye view of the structure and function of the nervous system... For those desiring an initial introduction to this field, especially if they are working in related areas, it is highly recommended."

THE BRAIN VASCULAR SYSTEM

by HARRY A. KAPLAN, New Jersey College of Medicine and Dentistry, Jersey City, N.J.
and DONALD H. FORD, Department of Anatomy, State University of New York, Downstate Medical Center, Brooklyn, N.Y.

7 × 10", x + 230 pages, 176 illus., 117 lit. refs., 1966, Dfl. 35.00, 75s., \$12.00

Contents: Introduction. Embryology. Anatomy of the adult vascular system. Arteries: Arteria carotis interna; Arteria basilaris; Arteria vertebralis; Veins; Arterial collateral circulation of the brain. The vascular system for the spinal cord. The meninges. The ventricular system and the cerebrospinal fluid. The blood-brain barrier. Bibliography. Subject index.

THE PERIPHERAL NERVOUS SYSTEM

by J. P. SCHADÉ, Central Institute for Brain Research, Amsterdam

7 × 10", viii + 230 pages, 3 tables, 84 illus., 3 full-colour wall-charts, 1966, Dfl. 30.00, 65s., \$10.00

This account provides a complete survey of the peripheral nervous system, presenting the anatomical, physiological and clinical aspects of the spinal nerves, the cranial nerves and the autonomic nervous system in great detail.

Contents: Introduction. Spinal nerves. Cranial nerves. Compendium. Selected bibliography. Index.

ATLAS OF THE HUMAN BRAIN

by DONALD H. FORD, Department of Anatomy, State University of New York, Downstate Medical Center, Brooklyn, N.Y.

and J. P. SCHADÉ, Central Institute for Brain Research, Amsterdam

7 × 10", vii + 166 pages, 139 full-page photographs, 1966, Dfl. 30.00, 65s., \$10.00

Contents: Gross anatomy. Vessels. Dissection. The sectional anatomy of the gross brain. Pal-Weigert atlas. Annotated bibliography. Subject index.

"...a superb collection of brain photographs in a relatively small, compact atlas... of great use to neurologists and anatomists... the first year medical student is likely to be a grateful user of this book."

THE NEURON

Edited by HOLGER HYDEN, Institute of Neurobiology, University of Göteborg, Göteborg

7 × 10", viii + 393 pages, 11 tables, 218 illus., 609 lit. refs., 1967, Dfl. 55.00, £7.0.0, \$19.00

This volume deals with structural and biochemical aspects of the neuron at the microscopic, sub-microscopic and molecular level. In seven chapters a complete survey is given of the functional and structural unit of the nervous system: the neuron.

Contents: The history of the neuron (H. v. d. Loos). Cortical grey matter - A correlation of light and electron microscopic data (Th. W. Blackstad). Dynamic activities of nervous tissue *in vitro* (C. M. Pomerat et al.). Dynamic aspects on the neuron-glia relationship - A study with microchemical methods (H. Hyden). Observations on the ultrastructure of the ganglionic neurons and synapses of the frog, *Rana esculenta* L. (J. Taxi). Enzyme localization and ultrastructure of neurons (A. B. Novikoff). Lysosomes in nerve cells (A. B. Novikoff). Author index. Subject index.

PURPOSE AND SCOPE OF THIS JOURNAL

This journal aims to be an international and interdisciplinary medium for the publication of authoritative and original contributions dealing not only with clinical neurological themes but also supporting experimental work in all of these sciences which underlie modern concepts of nervous structure and function. Papers written in French, German or Spanish will be published with summaries in two languages (one in the original language and one in English). In addition, from time to time critical reviews on a given topic will appear by invitation. A section on *short reports* and *preliminary communications* is also included to allow for the rapid publication of single case reports of outstanding interest and of preliminary reports, given in brief, of scientific research and methods. The usefulness as well as the interest of the Journal will be augmented by brief accounts of the *transactions of various neurological societies*, and the cooperation of the secretariat of such bodies is cordially requested.

A strong committee of regional neurologists and scientific advisers has been formed to assist in the collection and selection of manuscripts. Neurologists throughout the world are invited to assist in the production of this Journal which aims at the highest possible literary and scientific standards.

INSTRUCTIONS TO AUTHORS

Manuscripts should be sent to the Editor-in-Chief or to one of the Regional Editors (for their addresses see inside front cover).

Manuscripts in English, French, German or Spanish should be submitted in two copies in **double-spaced** typing on pages of uniform size (preferably 8×11 " [20×28 cm]). As a rule, papers should be divided into sections, headed by a caption (e.g. INTRODUCTION, MATERIALS, METHODS, EXPERIMENTAL, RESULTS, DISCUSSION, etc.).

Figures should be in a form suitable for reproduction, drawn in Indian ink on drawing or tracing paper, with lettering etc. in **thin pencil**. Photographs, including roentgenograms and electroencephalograms, should be submitted as clear black and white prints on glossy paper (no smaller than 4×5 " [10×12 cm] and no larger than 8×10 " [20×25 cm]). The degree of reduction will be determined by the publisher, but in general it should be assumed that the same degree of reduction will be applied to all figures in the same paper. **Legends for figures** should be typed (also with double spacing) on a separate page.

If illustrations from previous articles or books are to be used in papers submitted to the Journal of the Neurological Sciences, the written permission of author and publisher must accompany each illustration. **Tables** should be typed (also with double spacing) on separate pages. They should be provided with headings.

A **summary** of approx. 200 words is mandatory and must accompany all articles. Authors of papers in French, German or Spanish are encouraged to supply a translation of the summary in English as well. Authors' full names, academic or professional affiliations, and complete addresses should be included on the title page. The name and address of the author to whom proofs are to be sent should be given.

Citation of **references** in the text should be by author(s) and year. All references cited in the text should be given at the end of the paper and arranged in alphabetical order of first author. References must be complete, including initials of authors cited, year, titles of papers referred to, volume, and page numbers of periodicals. Titles of journals should be abbreviated in conformity with **World Medical Periodicals**, 3rd edition, 1961. For citations of books the following uniform sequence should be maintained: author(s), year of publication, complete title of book, editor(s) (if applicable), publisher, place of publication, page number(s) (if necessary). All references cited in the text must be represented in the list of references and, conversely, all items of the list of references should be cited in the text. This journal should be cited in lists of references as **J. neurol. Sci.**

Of each article **50 reprints** are sent to the author(s) free of charge. Additional reprints (100 copies at the minimum) can be ordered by the author(s) on an order form quoting prices and sent to the author(s) together with the proofs of his (their) article.

Copyright of all material published in this Journal is held by the Elsevier Publishing Company. Submission of a paper for publication implies the reverting of the copyright from the author to the publisher.

Permission to reproduce, in whole or in part, any materials published in this Journal should be obtained from the publisher and from the author of the article in question.

Submission of a paper to the Journal of the Neurological Sciences is understood to imply that it has not previously been published and that it is not being considered for publication elsewhere.

SUBSCRIPTIONS AND ADVERTISEMENTS

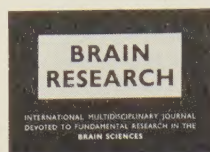

Issues will appear bimonthly and be contained in two volumes per year. The subscription price is \$35.00 or £14.13.0 or Dfl 126.00 per year (plus postage). Subscriptions can be placed with Elsevier Publishing Company, P.O. Box 211, Amsterdam, The Netherlands.

Additional charges for copies by air-mail available on request.

Further information and advertising rates available from the Publisher on request.
